BIO	During my undergraduate program, I was deeply interested in computational design processes and technology. As a fifth-year student at University of Arkansas, I was invited to participate in the Smart Geometry Conference to broaden my exposure to emerging design techniques. After graduating, I was recruited to work at Marlon Blackwell Architects. While at Marlon Blackwell Architects I developed several digital design technologies and processes that allowed for the integrated design and documentation of the Steven L Anderson Design Center. These tools would later earn the 2012 American Institute of Architects Technology in Architectural Practice Building Information Modeling Award for Exemplary Use of BIM in a Small Firm. Since then my roles at Marlon Blackwell Architects have expanded to managing the design and construction of various projects ranging from a small single-family residence to a multi discipline park project with six individual structures. Working at this capacity has allowed me to be involved through all phases of a project; from the conceptual phase through the design, rendering, documentation, construction, and ultimately completion. In 2011, myself and two of my colleagues founded <i>deprocess</i> consulting company that teaches digital design processes at architecture schools. Deprocess deconstructs architectures' digital design processes by teaching Emergent Design and Technology classes for students ranging from second year all the way to fifth year and graduate level.
